L-Acoustics Unveils Ultra-compact X4i Coaxial Enclosure

Acoustics_X4i_Front– X4i joins L-Acoustics X Series product range delivering a world-class sonic signature in a compact, highly weatherized enclosure

Newest addition to L-Acoustics X Series product range delivers high performance in a highly weatherized, purpose-built tiny package for discreet installation applications

Amsterdam, Netherlands – January 2019 – ISE booth 7-X230, Hall 7 / Demo room E103– For the Integrated Systems Europe (ISE) trade show, L-Acoustics proudly announces the launch of X4i, a powerful yet superbly unobtrusive and highly weatherized coaxial loudspeaker for installation applications. In a convenient enclosure weighing less than a kilo, X4i, the smallest loudspeaker the company has ever manufactured, measures only 3.9 inches/99 mm deep, yet still offers the L-Acoustics world-class sonic signature.

Perfectly dimensioned for ease of integration into conventional construction materials, X4i is ideally suited to fill applications in performing arts centers or houses of worship, matching the sonic signature of main L-Acoustics systems such as ARCS and Kiva. X4i can be hidden in walls, stair risers, stage lips, pit rails, under balconies or any other tight spot with ease.

The enclosure can additionally provide vocal reinforcement in settings such as conference rooms, museums and exhibits, and hospitality venues.

L-AcousticsX4i with 5XT– X4i is the smallest loudspeaker ever manufactured by L-Acoustics, shown here with 5XT

Combined with Syva Sub, X4i constitutes an ideal solution for indoor or outdoor background music in restaurants, bars, hotels, and retail locations. Furthermore, the robust, weather-resistant X4i boasts an IP55 rating and becomes watertight with a rear sealing plate, allowing integration in challenging climatic or outdoor environments.

Complemented by a versatile mounting accessory, X4i delivers extreme flexibility of use for optimal discretion in a high-performance package, purpose-built to integrate into conventional construction.

Jeff Rocha, Director of Product Management at L-Acoustics, concludes, “In developing X4i, our aim was to provide unsurpassed utility without compromising on sound quality while catering to known architectural constraints. X4i is quite literally the perfect fit for the integration needs of today’s installation markets.”

X4i ships beginning in March. Please visit the L-Acoustics booth 7-X230 in Hall 7 at ISE 2019 from February 5-8 to learn more about the robust and versatile X4i.
