

Prolight + Sound 2019 sees DiGiCo showcase new software upgrades for the SD12 and SD10 which take both consoles to a completely new level.

When the SD12 was launched, it raised the bar for a compact, affordable, multi- application digital console. It delivered DiGiCo sonic quality, had dual 15-inch touch screens and was the first SD Range console with a built-in recording interface. This combination, along with its power and expandability, all packed in a reduced footprint, has fast made the SD12 one of the world's favourite live mixing consoles, especially during festival season.

Now you can super charge your SD12, taking it from 72 to 96 channels and from 36 to 48 aux/sub groups, with the new SD12 96 upgrade.

Along with the SD12 96 chargeable upgrade, the new SD10+ upgrade comes free of charge. Only available for Core 2 consoles, SD10+ expands the already powerful SD10 from 132 to 144 input channels. Both upgrades continue DiGiCo's commitment to providing continued additional value on clients' original console investment.

Both the SD12 and SD10 upgrades will be available from the DiGiCo online shop in April.

To find out more about these and other exciting new developments, please visit Stand 8.0 F40 at Prolight + Sound 2019 from 2nd to 5th April 2019.
