Astera at ISE 2026

Posted on February 2, 2026

Innovative wireless LED lighting manufacturer Astera is set to harness the buzz and energy of Integrated Systems Europe (ISE) 2026 in Barcelona with the teaser of an exciting new product.

Something hugely cool and new … will be revealed at ISE, and visitors can discover the latest innovation at the Astera booth – J700 in Hall 6.

There will also be plenty of other Astera highlights on the stand, including the recently launched Quik Family – QuikSpot and QuikPunch – luminaires.

QuikSpot is a battery-powered up-lighter launched by Astera in 2025 with a precise, zoomable fresnel lens and 13–60º adjustable beam angle … that is also a versatile and compact spotlight.

QuikPunch is also a wireless spotlight with a fresnel lens plus extra output, delivering an impressive 8,000 lux at 3 metres – while consuming just 75W of power – so a good 650W equivalent.

Since their launch, both Quik fixtures have been a popular choice across multiple lighting sectors – film, broadcast, television, events, music shows – and a big hit with rental companies.

Also launched last year was the SolaBulb, the latest addition to Astera's Bulb Family, which includes NYXBulb and LunaBulb.

SolaBulb is a zoomable LED bulb with a 15-50º adjustable beam – giving both spotlight and wide-angle beam spreads – plus a refined PAR20 fresnel lens. Equivalent to a 50W tungsten PAR bulb, a cool optical design gives this very handy luminaire a fabulous 'architectural' / scenic look with all the finesse and detail needed to help light a diversity of scenarios.

And of course, Astera’s legendary Tubes will be there – Titan, Helios and Hyperion – the products that helped establish Astera as an industry leader in LED manufacture.

Additionally, the booth will feature the numerous Astera smart solutions, all illustrating the brand’s commitment to keeping ahead of the curve and offering extra value to all lighting professionals, as demands grow to be more adaptable, flexible, and multi-purpose.

As well as the flagship battery-powered and remote-controlled lighting ranges, products on the booth will illustrate Astera’s broader ecosystem and its continuity and compatibility across all ranges. Also prominent will be the amazing array of practical Astera must-have accessories and control options that further enhance workflow efficiency and creativity.

Astera regards ISE as a key industry platform and meeting place for AV, lighting, and systems integration professionals, so a strong presence is important, both to capitalise on opportunities for meeting new and existing clients, and for strengthening relationships with partners, distributors, creatives and end users from around the world.

Being there also helps underline Astera’s position as an innovator in the exciting and fast-moving field of wireless lighting technology.

For Astera, it is also so much more than just about showcasing products.

As an industry networking hub, ISE is valuable for gathering feedback on existing products and amassing ideas for upcoming R&D.

The slick, clean booth design echoes Astera’s all-action contemporary brand image and showcases products in an application-focused context for all sectors of entertainment technology to see and enjoy. Dedicated demonstration areas will allow visitors to get a close look at the fixtures and chat in depth to product specialists.

ISE’s strategic timing at the start of the year is another huge bonus and convenient for many people to visit. It helps set the scene and timeline for other product launches and activations that will be mapped out during the year, adding extra resonance as an ideal kick-off point for longer-term campaigns and planning.
