

Astera NYX Bulb

DID YOU KNOW?
3 NYX BULB VERSIONS

astera-led.com/nyx

E26 Version
America & Japan
100-120 V

E27 Version
Europe & Asia
100-240 V

B22 Version
UK & Australia
100-240 V

The graphic features a large glowing white NYX bulb on the left. To its right, three circular insets show different socket types: E26 (top), E27 (middle), and B22 (bottom). A bracket on the left side of these insets points to the bulb's base. At the bottom center of the graphic is a small white logo consisting of two triangles.

The NYX Bulb is available in 3 different versions to match the 3 socket styles used around the world. Having a “universal version” would not be possible according to CE & UL standards. When shooting abroad, make sure to use the correct version for safety reasons.

The dummy socket which comes with the PowerStation works with E26 and E27 sockets since it does not carry power. B22 dummy socket is coming soon.
