grade, half-inch Type 1 metal film capsule to deliver unmatched audio capture for professional studio recording, broadcast, film or sound design.

With a frequency response of 10Hz-20kHz, a wide dynamic range of 133dB, and an ultra-low self-noise of 7dBA, the A127 excels in the most demanding applications. Capsule design features a precision-tuned, 3-micron metal diaphragm for exceptionally detailed and reliable performance.

The A127 circuit is designed and built to exacting specifications and is coupled to the capsule by a series of driven shields to protect the microphone from external interference and capacitance coupling.
