

Audix A231, the new gold standard

The A231 sets a new gold standard for capturing the human voice.

GRILLE

A double woven steel mesh grille and ultra-thin acoustic foam offer exceptional pop resistance for podcasting and vocals.

INTERNAL SHOCK MOUNT

A unique and highly effective internal shock mount isolates the capsule from mechanical vibrations and touch noise, eliminating the need for a bulky external shock mount.

ACTIVE DRIVEN SHIELD

Protects the signal path from the capsule to the preamp from interference by capacitive coupling and eliminates leakage.

CAPSULE

The 33 mm externally-biased condenser capsule features a precision-tensioned diaphragm with 25% greater effective area. The cardioid polar pattern rejects room noise and other unwanted, off-axis sounds while faithfully capturing the details of your performance.

HOUSING

Precision-machined from aircraft-grade aluminum with a durable, black-anodized finish, the rugged housing protects the circuitry of the low-noise preamp.

“What a beautifully rich-sounding microphone. The A231 sounds like it is voiced more like great FET mics of the past with a rich neutral totality and a gentle, firm upper-mid presence. There is absolutely zero bite, sibilance or sizzle on the top end, and my favorite part of the A231 is its extended, full proximity effect. The A231 is a mic that begs to be close to a source and would do well on upright bass and cello, and could be a great choice on a bass cabinet, outside, yet close up on a kick drum, and a pair would be nice for classic drum tones in a Glynn Johns overhead set up. Where this mic really shines is on vocals and spoken word. In both cases, it has a low-end fullness that a good singer and speaker could really work to their advantage.” – **PAUL VNUK JR | RECORDING MAGAZINE**

“On vocal, the A231 really got to shine. Because this mic is not overly hyped, it showed off just the right stuff on vocals. I tried it on male vocals and the nice proximity effect gave me warmth and low end in a controlled and musical way. Meanwhile, the mids were pronounced and cutting through the

track without sounding harsh. To top it off, the highs were present in a natural way, rounding out a wonderful vocal sound. I love how this mic feels. It delivers a robust and quality sound.“ –

RETO PETER | MIXER / ENGINEER (GREEN DAY, THE COUNTING CROWS & MODEST MOUSE)

“The Audix A231 has a very smooth response and very clear but not clinical dynamic resonance.“ –

ADAM LEE | STAFF ENGINEER AT JACKPOT RECORDING PDX
