

The first recorded pioneers to settle in Nelspruit – around 25 kilometers of the Kruger National Park in Mpumalanga – were the three Nel brothers. It is documented that they migrated to this tropical climate with their “game friends” and “game friends with”

Today in Nelspruit, Kyle Nel of AVS, coincidentally with the same name as the Nel brothers, is making his own mark in history using modern technology in a city where the main industry is forestry, citrus and tropical farming and of course the tourist attraction of the game reserve. He recently took ownership of two Robe Pointes and Prolyte Dex and Trussing, purchased from DWR Distribution.

“I’ve always had a keen interest in sound and music, and while I have no musical talent whatsoever, I have a natural ability with anything remotely technical,” said Kyle.

Along with his methodological demeanor, Kyle has determination in abundance and when AVS was established in 2002 he nagged the owners to give him the opportunity to work for them. Eventually in 2005 he joined as the young apprentice.

At the expense of personal relationships and a social life, he climbed the ladder and by 2011 owned fifty percent of the company.

In January 2014 Kyle became the sole owner of AVS. He and his team are taking the company to a new level

which has included rebranding, streamlining of operations and just recently, purchasing new equipment. AVS is a small business with a healthy dose of top quality gear.

While Nelspruit has its fair share of competition, there is enough work to keep everyone busy. “Nelspruit is growing fast and people are realising the power technology has to promote andliven up brands,” explained Kyle. “It’s great! There are vehicle and product launches and with every event, we take the standard up another notch.

For AVS it’s all about efficiency, quality of work and end results. “This, along with a direct ‘one-on-one approach’, solidifies the client relationship. Each event tends to be bigger and better, as well as more order-deliver,” said

As AVS Hire is moderately small it means that even small additions to their lighting warehouse make a big difference. Kyle was looking for something that on its own could create the ‘wow’ effect and the two new Robe Pointes have certainly delivered. “In short, bring whatever lights you think can match them, somebody’s going home and it isn’t these boys!” he said.

“The Pointes have an amazing amount of built in effects and are easily programmable, they move as quickly as small LED beam fixtures and the beam effects are way stronger than expected from a small fixture. They are real power!”

The Pointes have already been used on over 20 gigs, ranging from comedy shows, school socials, a events inside Sudwala caves, vehicle launches, a glow run and probably the most exclusive 50th birthday party in town.

"The gobos are crisp, the beams cut through heavy haze with a laugh and the wash is so easily focused without evident hotspots. Colours are vivid and lets not forget the prism! New Bebe just need to build a smaller LED

Staging

Part of Kyle's vision for AVS was to purchase professional trussing and staging. "Everybody has different tastes, but again, I did loads of shopping and the Prolite Dex came out tops," he said. "They're light, super strong and easily manageable, the range is also incredible, and the fact that DWR can supply me with whatever I need to add or bolt on is a bonus."

AVS also chose the H30 Prolite series particularly for ease of use and time saving. "Nobody wants a rigger whacking away, even with the DWR Thor Hammer, at a stubborn pin for 5 minutes. Never mind the damage caused to the gear," said Kyle. "The Prolite truss, being as popular as it is, makes it easy for me to expand/rehire (from MGG because I like them) when the need arises, making rigs neater and more uniform in general."

He says the new banana base plates take up a third of the space, are a third of the weight and stack up more easily than conventional 50kg 1m round plates.

to been well

The Cabling Department

Lastly, AVS bought cabling from DWR. “You guys are machines!” said Kyle. “The cable quality is superb, the joints and stripped ends are cut properly, the extra effort put in to ensure the cables are labeled with our company name and description, heat-shrunked and Velcro tagged stuns me,” said Kyle, who was also pleased with the turn around time. “The cable innovations like PowerCon with 5p DMX or the plug/Janus with 3p DMX for LEDI cans, that is pure passion to solve what every rigger knows is a pain when setting up 72 fixtures on trussing with DMX.”

He ends, “The entire DWR team surprises me every time I deal with them with a special mention to Robert [redacted] [redacted] business and its
