

## Clear-Com Will Present IP-Based Intercom Solutions for Broadcast and Media at Broadcast Asia

[Clear-Com](#)® looks forward to returning to Singapore for Broadcast Asia 2023 where the company will showcase a broad range of intercom applications on Stand 6F1-05, including innovative new product features of their flagship [Eclipse](#)® HX Digital Matrix Intercom System, such as [Dynam-EC](#)™ real-time production software, IP-based V-Series [IrisX](#)™ user panels, and industry-leading role-based workflows. Additionally, Clear-Com will highlight their award-winning IP-based [Arcadia](#)® Central Station with [HelixNet](#)® integration.

A popular choice for broadcast applications such as flypacks and OB vans, Arcadia Central Station brings together HelixNet, [FreeSpeak](#)®, Clear-Com [Encore](#)®, other 2W/4W endpoints, and third-party Dante devices in a single, integrated system. Arcadia offers licensed-based scalability that allows it to meet numerous production needs, with support for over 100 beltpacks and up to 128 IP ports, with additional upgrades available in the future.

For applications requiring up to 200 FreeSpeak beltpacks and point-to-point workflows, the Eclipse HX Digital Matrix offers a range of unique tools to deliver power and efficiency, notably the Dynam-EC software which allows for operator situational control over all Clear-Com audio input and outputs, audio mapping, IFBs and partylines. New features introduced in EHX 13 for Eclipse HX support many of the needs of today's broadcast applications that require more automation and increased efficiency. Meanwhile, Clear-Com's new V-Series IrisX IP User Panel for Eclipse delivers thin-film-transistor (TFT) displays for brightness and enhanced resolution – ideal for outdoor applications – combined with low latency and high port capacity.

“Clear-Com's ongoing innovations harness the latest technologies to enable our customers to communicate as easily as possible, whether across studios, multi-site broadcast facilities or large sports stadiums,” says Peter Fong, Director of Sales Asia Pacific. “Only by listening to customers around the world can we develop solutions that make a difference to their productions. We look forward to meeting our customers and partners at Broadcast Asia 2023 to continue these crucial conversations.”

U.S.-based Clear-Com President Bob Boster and U.K.-based Senior Vice President of Sales Chris Willis will also be in attendance at the show and look forward to reconnecting with the Clear-Com community in the region.
