

DiC

DiGiCo and KLANG return to Barcelona for ISE 2023 to give visitors another opportunity to experience the power of DiGiCo's Quantum range of consoles, its 4REA4 installation system and KLANG's innovative immersive in-ear mixing systems.

The DiGiCo Quantum 7 delivers unrivalled power and flexibility. It features 600 channels of processing in 96kHz operation, eight assignable MADI connections and two DMI slots (DiGiCo Multi-Channel Interface) for AoIP along with other connectivity options from the complete family of DMI card options. Other powerful enhancements include Nodal Processing and True Solo.

The Quantum 338 provides power and connectivity in a remarkably compact format. It includes 128 input channels with 64 busses and a 24 x 24 matrix, all with full channel processing. There is a new look and feel dark mode application and three 17-inch, 1000 nit high brightness multitouch screens, allowing both the meter bridge and soft quick select buttons to be displayed on each screen.

The agile and flexible Quantum 225, meanwhile, has been developed to meet the demands of the changing environment of live events. Specified with the DQ-Rack with integrated Dante, it also delivers the perfect system for AV installation and the demands of an AoIP networking environment.

Designed to run as either a stand-alone install system, as an enhancement to an existing installed system, or to add install functionality to a multi-console setup, the 4REA4 is a powerful low latency FPGA based audio engine, featuring allocative processing, customisable I/O and a range of programmable hardware controllers, while delivering high quality audio that lives up to the DiGiCo name.

KLANG's immersive in-ear mixing systems will also be featured on the stand, including the KLANG:konductor, KLANG:kontroller and KLANG:quelle.

The KLANG:konductor is the most powerful and versatile immersive in-ear mixing processor to date, delivering connectivity that is ready for today and tomorrow. Designed with monitor engineers and fixed installations in mind, the high-end mixing system delivers 16 immersive mixes and processes 128 input signals at up to 96kHz, at an astonishing internal latency of less than 0.25ms.

KLANG:kontroller is the first hardware controller with full control right at your fingertips. It delivers fast tactile user control of channels, groups and immersive mixing via an intuitive interface. The times of outdated name tags and dialling through all channels are over with eight displays providing clear channel names and colour coding.

KLANG:vokal is designed specifically to match the feature set of the KLANG:kontroller, but can also work as a standalone immersive processor. Based on KLANG's powerful, new generation, ultra-low latency FPGA core, KLANG:vokal offers 12 mixes of 24 mono or stereo inputs at 48kHz and 96kHz, including the revolutionary Root-Intensity EQs.

"ISE is always a great opportunity to meet our customers and remind them of the benefits of DiGiCo and KLANG's solutions," says DiGiCo Managing Director, Austin Freshwater. "After a successful return to the show in 2022, we're looking forward to an even busier 2023 edition."

See DiGiCo and KLANG on Stand 7F300 at ISE 2023 from 31st January to 3rd Feb.
