DiGiCo Announces New 4REA4 Installed Audio Solution At ISE 2018

*Designed for installed audio performance, the new **4REA**4 platform of products expands DiGiCo's live performance reach for multi-area venues and stages.*

Chessington, UK February 3rd 2018 – DiGiCo, the world's leading provider of high-end digital live consoles, will be showcasing its new 4REA4 installed audio solution at ISE 2018. 4REA4 is designed to meet the expanding performance requirements of large entertainment venues, houses of worship, theatres and shared stages at festivals and music venues.

At the heart of the system is the **4REA**4 processing engine with DiGiCo connectivity options and powerful **4REA**4 control software, providing routing, processing and mix control that allows your performance area to expand across your installation. The **4REA**4 processing engine rack has four dedicated mix areas, or zones, each with its own stereo master output, CGs, and allocated FX. With an available 128 input channel and 48 buss output processing strips, you can independently allocate processing to whichever area as required.

Managing the mixing and routing of each individual local performance area are a new range of premium designed hardware control panels and external I/O units, that work in conjunction with the **4REA**4 processing engine and control software. New Ethernet connected controller options include the wall mounting single rotary **ACONTROL1** with a TFT display for small area performance management, and the **ACONTROL8** with eight 100m faders designed for more complex mix and function control.

Local I/O boxes are managed via proprietary Ethernet or Dante connectivity for extended reach across a facility, with options including the new **A16**8 **STAGE** floor rack and the **A16**4 **WALL LCD** box, both providing mic and line level connectivity to ensure a premium 96kHz audio experience across the most demanding performance venues.

“It’s a natural but very exciting step in terms of expanding our current range of live performance solutions,” comments James Gordon, Managing Director of DiGiCo. “**4REA**4 will allow our customers and new facilities to expand the function and reach of our live consoles today, whilst providing a new installation platform that delivers the highest quality audio and control across multiple performance areas. And it’s all backed up with the signature DiGiCo leading audio performance, connectivity and reliability”.

DiGiCo and the new **4REA**4 solution will be at ISE 2018 stand 7K200.
