DiGiCo Releases Software Upgrades for Quantum112 and Quantum225 Pulse Mixing Consoles

Compact Quantum Range desks now offer bigger features that further belie their small footprints

DiGiCo announces the immediate availability of new downloadable software upgrades for its two most compact Quantum Range mixing consoles, the Quantum1¹² and Quantum2²⁵ *Pulse*.

DiGiCo's Quantum1¹² *Pulse* upgrade increases the desk's input channel count to 96 and aux/subgroup busses to 48—up from 80 and 24, respectively—while also expanding the product's matrix with four additional outputs, taking it from 12×8 to 12×12. Furthermore, Mustard processing instances get bumped from 20 to 24, with Nodal Processing seeing an even larger increase, going from 24 to 32. Available for a list price of £995, the software upgrade is accompanied by a new version of the application.

Owners of non-*Pulse* models are also able to take advantage of the enhancement for a list price of £2,295, bringing their desks up to the highest spec, which also boasts 48 busses, a 12×12 matrix, and 36 Mustard plus 48 Nodal Processing instances. A new version of the application is also available.

an absolute premium,” says DiGiCo Managing Director Austin Freshwater. “But at the same time, those logistics and size constraints should never come at a trade-off to workflow, power, features or sound. That’s exactly where these two consoles now shine even brighter with their new software upgrades, which pack in more than ever for our users to love.”
