

## Doughty's Lightweight Lighting Stand makes its Prolight & Sound debut

Doughty's new Lightweight Lighting Stand will make its Prolight & Sound debut this year. Visitors to Hall 3.0 stand E11 can see the new piece of kit, which is currently in prototype format and takes the principles of a Tank Trap but packages them into a neater, more aesthetically pleasing model.

### Lightweight Lighting Stand

Dan Phillips, project sales co-ordinator at Doughty explained: "The new Lightweight Lighting Stand comprises a flat, round plate and slim tube, slotted at each end to allow cables to run unseen inside it. A 28mm receiver is incorporated in the top of the stand which will take an industry standard 28mm spigot. When used in conjunction with a spigot adapter, the stand can also be used to hold small speakers. This robust piece of kit has a sleeker appearance than the standard Tank Trap and comes with a stacking slot which allows for the stands to be stacked together as well as a carry handle. We're delighted to be bringing this prototype to Frankfurt to get feedback from everyone who attends."

The Three Position Tank Trap will also feature on this year's stand. Following its debut in 2017, it went on to win the ABTT Engineering Product of the Year. This clever piece of kit enables rigging to be built close to a wall, in the corner of a room or near to an obstruction. It has a detachable receiver suitable for 48mm barrel, which may be fitted to any of the three mounting points, which are located in the centre as per a standard tank trap, at the edge and in the corner.

In addition the Tank Trap Trolley will receive its Frankfurt debut. Designed by Doughty as a result of feedback from its customers at last year's show, this compact trolley can transport and store ten Three Position Tank Traps. Receivers slot in between the Tank Traps and are captivated by a retaining plate.

The Space Saver Omega will make its first appearance on stand E11. Launched in Q4 of 2017, the Omega version of the Space Saver sees one of Doughty's Omega clamps permanently fitted to a lumiere with a hinge that locks into place. In the closed position, the lumiere can be put in its flight case neatly and easily without having to dismantle all the pieces, thus eliminating the chance that pieces are lost or mislaid when moving from one location to another. Dan commented: "Not only is it a more ergonomic solution, but it also speeds things up for the lighting technician who might find himself having to move lights into different locations on a rig, or for the touring lighting professional for whom time is always of the essence."

Space Saver Omega

Laurence Dyer, UK sales representative at Doughty added: "We'll also have our Pole Operated Yoke and of course our wide range of clamps and a selection of items from our extensive product range. Prolight and Sound is one of the most important dates in our trade show calendar – we get the opportunity to launch new kit in front of a truly international audience and allows us to get feedback from around the globe which we genuinely appreciate since we know that what works for our customers in one country doesn't always work in others. Getting the chance to gather feedback while the product is still in its prototype stage allows us to consider how we can make the product an item which, when it hits the shelves, ticks all the boxes for all our customers."
