

# Emergency Operations Control Centre

Posted on April 24, 2025

Clear-Com provides many solutions for scaling the operation. Primary among these is to move to a small matrix that uses modular cards to scale as the size of the requirement grows. Individual

ports connect to remote stations, wireless systems, telephone systems, [Station-IC](#) on computers, and to [Agent-IC](#) clients apps on smartphones.

#### Application Notes

Fixed wired panels in the operation centre would connect back to the central matrix and from the same matrix connections through IP to the remote wards or doctor's teams. In this way, multiple large groups of medical teams can be kept informed.
