

Exciting news from Neutrik

Posted on February 28, 2024

Neutrik is pleased to launch their latest products with you - uncover the Extraordinary!

Analog AES72 Stagebox

Introducing the new [Analog AES72](#) Stagebox - advanced analog technology for applications where robustness & compactness is key.

The NA-4I40-AES72 is a 4-channel stagebox for transmitting microphone levels, analog line levels, AES3, DMX or even intercom via one single CAT cable. The device has male and female XLRs in the same housing and can be used directly as a splitter for monitoring. An additional etherCON serves as feedthrough and allows further looping of the signals to other devices. A ground lift at each input prevents possible ground loops. In addition, each input connector offers the possibility to invert the signal.

[FIBERFOX](#) EBC15&25 in Single Mode

Their new connector, compatible with MIL DTL 83526, delivers top-notch performance while preserving the beloved ruby-red design of the EBC 15 series. In addition, the new Single Mode technology is available for our EBC25 series bringing it closer to government and industrial application. With an impressive IP68 rating and a robust design tailored for harsh environments, NEUTRIK ensures seamless operation even in the most challenging conditions.

etherCON® A-Series

The [etherCON A-Series](#) is now available with the new ESD protective push tab.

The ESD protective push tab improves electrostatic discharge (ESD) protection and can avoid damaged electronic components in devices during usage. Furthermore, the asymmetric design saves space for labelling purposes.

In addition, the push is not reflective due to black coloured compound material. This not only avoids shiny parts on the stage but also perfectly matches the flange and housing for a unique and clean appearance.

All products with metal push will remain available.
