

## Fenix AT Series

The FENIX AT Series towers are the perfect frontal loading models to lift line array systems, trusses and LED screens.

Manufactured of aluminum, it allows the load to be lifted from the ground with minimum effort and saving time.

Thanks to the attention to detail such as the integrated design of rings, single piece triggers and trolley locks, these towers have an added safety, stability and strength that gives confidence to anyone who has to interact with them: the public, riggers, forwarders...
