

Fennix at ISE 2023 Barcelona:

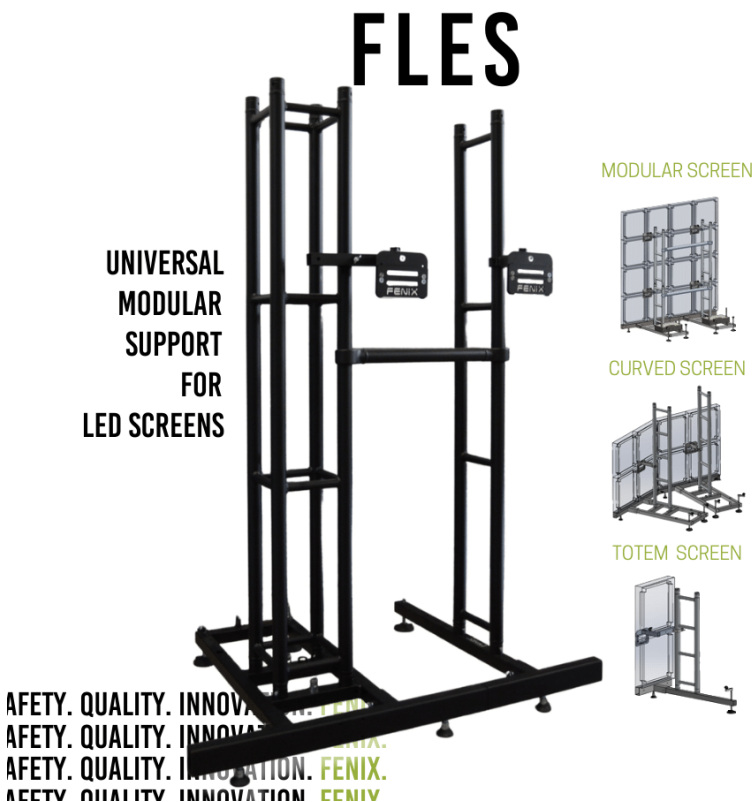

In case you missed ISE2023, Fenix have shared their results in newsletter and write:

“As in all ISE shows, our expectations have been exceeded, the new product official launches such as the new universal modular LED support for LED screens or the PACQ-1000 lifting tower have been the main attractions of our booth. As a fair, ISE has broken records in Barcelona and we have noticed it by the number of customers, new potential distributors and projects that we have received these days.

From FENIX Stage, we want to give very thanks to all the customers, distributors and media that approached to our booth showing their interest.”

FLES (FENIX LED SUPPORT)

The new universal modular support for LED screen has taken design into account for all the needs of an event.

Easy to set up and stabilize, compatible with all kind of LED Screens. With FLES you can create curved profiles of LED screens adding the union hinge. FLES has been designed to focuss on small details to maximize security, set up facilities and durability of professional appearance thanks to its textured black finish.

PACQ-1000

Our new lifting tower, the PACQ-1000, can support 1,000 kilograms of load up to 8 meters high. Designed to charge sound and lighting equipment, like a PA tower, but compacter and safer, with ease of assembly thanks to an engine you can lift the structure and load, an innovation that provides a safe, compact and unitary transport that will avoid loss of parts and save time and assembly operators to set up.
