

grandMA3 software, as easy as play

Introducing the perfect, single universe, control solution! This is the easiest way to access 512ch on grandMA3 software, or to add an additional 512ch to any MA3 onPC Solution. This is over and above all the universes allowed for third-party visualization.

Access one grandMA3 universe with an eDMX1 dongle via Art-Net or sACN. This is simple to set up, basic plug-n-play. The software will immediately detect the Viz-Key and grant 512ch for output. Combine this with MIDI remotes or OSC Devices to add hardware to your system for ease of control.

Use up to 250 000 parameters to visualise your show, this is the max limit of any MA3 system. Most common

third-party visualizers are members of MA-Net3 and will be able to visualize these parameters immediately.

This is the simplest and most affordable way to get working on the MA3 software.
