grandMA3 software release version 1.9 out now!

Posted on April 17, 2023

New functionalities for an optimized programming workflow

MA Lighting has now released grandMA3 software version 1.9. This software release presents

grandMA3 software release version 1.9 out now!

massive workflow improvements and new functionalities in the following areas:

- New SpeedMaster layer for phasers
- Actions in pools
- Selection Grid tool in 3D
- Notes
- Relative XYZ
- Break in cues
- CMY color readout
- Improved showfile handling

In addition, there are lots of improvements in overview and visibility. The encoder bar got a first clean up and better graphical elements and additional information for the user lead to an enhanced programming experience. The software release version 1.9 also provides multiple workflow improvements and massive optimization in network and multi-user environments.

The complete list of features and enhancements is documented in the release notes and under: www.malighting.com/grandMA3-software.

Here are some video tutorials directly available.

Additionally, the MA E-Learning with the grandMA3 special course v1.9 presents detailed information about the new software release. The local MA distributor will help to get access to the MA E-learning platform.

Last but not least, MA Lighting offers grandMA3 v1.9 public webinars! 45 minutes with the most important changes and functions of the new software version, presented by the MA Lighting Tech-Support. Here is the link to register for one of these free webinars on 18., 19. and 20. April: <https://attendee.gotowebinar.com/rt/4398774817948473180>

The grandMA3 software is the soul of the grandMA3 platform and is designed to meet current and future lighting control requirements. MA Lighting provides new and existing users of all genres with a lighting control tool to create new and exciting shows at any scale.
