Green Hippo Launches Montane+, its Latest Hippotizer Media Server

Posted on October 5, 2017

Green Hippo has launched Hippotizer Montane+, its newest Hippotizer Media Server**.** As the latest addition, Hippotizer Montane+ is a formidable force in the live production world. Featuring Notch, the real-time graphics workhorse, a favourite among content creators, Montane+ seamlessly enables users to create, simulate, render, composite, edit, and play. Always in real-time. It’s a smooth experience, too, with Hippotizer V4’s pin system letting you control content from the lighting desk, or other controller. Simply export and playback directly within Hippotizer – easy.

Montane+ features two DP 1.2 outputs, and offers the very latest graphics card technology, enabling over 25,000 Notchmarks. Even the most demanding of 3D and generative projects are handled with ease and control. The media server also comes with 10 free Notch FX as standard, plus a playback license.

“We’re really excited to launch the Hippotizer Montane+. It pushes the creative boundaries of AV professionals, with a familiar workflow that works in all stages of live production.”
Ryan Brown, Product Manager, Green Hippo

Hippotizer Montane+ will be available from November 2017 worldwide. For further information please contact your local Green Hippo distributor/dealer.
