How Distributed Architecture Simplifies Setup and Speeds Up Deployment

Posted on November 17, 2026

Traditional immersive installations can involve complex system design, extensive cabling and

multiple external components that take time to install, configure and commission. Distributed Architecture offers a more streamlined approach, helping simplify system setup and accelerate deployment.

Less Hardware. Simpler Setup

With Distributed Architecture, playback is integrated directly into compatible Panasonic projectors and displays, powered by Intel® SDM technology and Beeblade media players from HIVE Media Control. Fewer external components mean a simpler system to install and manage, helping make deployment more straightforward.
