

Introducing the new Audix A10 and A10X Earphones

Discover the detail! Introducing the new Audix A10 and A10X Earphones.

Audix A10 Earphones are engineered to deliver studio-quality performance for live sound monitoring and critical listening with exceptional imaging and isolation. The A10 features a dynamic low-mass moving coil assembly and titanium alloy diaphragm delivering ten octaves of frequency response with accurate phase coherence. The balanced sound signature of the A10 allows for hours of listening without fatigue.

The Audix A10X Earphones with extended bass are designed for the ultimate immersive listening experience. At the heart of the earphone is a dynamic low-mass moving coil assembly and composite beryllium diaphragm delivering over ten octaves of balanced frequency response and extended bass. With exceptional imaging, isolation and phase coherence, the A10X accurately presents the full details of your music.
