

It's not, but it looks like pure gold – extended colour selection
available for HARVEY Remote Control variant

It's not, but it looks like pure gold - extended colour selection available for HARVEY Remote Control variant

Posted on June 17, 2024

DSPECIALISTS expands the colour range for the HARVEY Remote Control for American switch ranges. The remote control, which was already available in aluminium silver, is now also available with an elegant, gold-coloured metal surface.

Berlin, 12.06.2024 - With the HARVEY Remote Controls, DSPECIALISTS offers the perfect remote control as a sophisticated sidekick to the HARVEY audio and media control matrix. The range of possible applications for the HARVEY audio and media control matrix is as varied as the designs of the places where a remote control can be installed on the wall. The colour palette has been extended to allow the remote control to be harmoniously integrated into an individual room concept. The remote controls, previously available in aluminium silver, are now also available with an elegant gold-coloured metal surface.

Wherever several audio sources need to be distributed flexibly to several rooms, or different acoustic and visual scenarios need to be created in a room at the touch of a button, HARVEY operates in the background and the HARVEY Remote Control – in keeping with the design of the location – in the foreground. Public buildings such as theatres, museums, educational establishments or churches are just as predestined for HARVEY's use with RC as bars, restaurants, hotel facilities or conference and training rooms.

The freely programmable HARVEY RC4 and RC12 remote controls are Ethernet-based and designed for wall mounting. As with the HARVEY concept in general, integrating the remote

control into a project is also very simple. Installation is completed in a few simple steps and programming is carried out using the HARVEY Composer software. Created scenarios are saved as presets and called up via the remote control. The colour and brightness of the LEDs can be individually adjusted. The buttons can be labelled either with symbols, numbers or specific text and are visually clear and quick for the user to use.

In addition to the plastic version RC4-EU for 60mm flush-mounted boxes for the European market, the remote control for American switch programmes with a sophisticated metal surface is now also available in four versions. There is a choice of the RC12 US-AL and RC12 US-GO, each with 12 buttons, as well as the RC4 US-AL and RC4 US-GO, which are the counterparts to the RC4 EU with 4 buttons and a rotary control.

The golden versions – as well as all others – will be available from stock from July 2024.
