

Klotz adapter cables

Posted on April 20, 2021

If an adaptation BNC to BNCmicro or DIN1.0/2.3 is required, as is increasingly the case due to the high packing density on the units, the KLOTZ adapter cables of the following series are suitable.

[VU06H*DPD*](#) D&H (BNCPro male / DIN1.0/2.3), [VU06H*DFD*](#) D&H (BNCPro female / DIN1.0/2.3),
[VU06H*DPM*](#) D&H (BNCPro male / BNCmicro), [VU06H*DFM*](#) D&H (BNCPro female/ BNCmicro),
[VU05H*DFM*](#) D&H (BNCPro female / BNCmicro).

The BNCmicro connectors are compatible with HD-BNC™. Both connectors offer a reliable connection for video signals with high data rates, the BNCmicro connector is designed for standard 4K signals as well as 8K (24G) signals and can withstand at least 1000 mating cycles. The premium quality of the DIN1.0/2.3 (DIN 47297) connectors is ideally suited for reliable connections of UHD / 4K signals up to 12G.

With digital video cables of the KLOTZ VU-series, you get the best out of your 12G-SDI images. Designed for installation in the studio as well as for mobile use, durability and excellent transmission quality go hand in hand here.
