KLOTZ AIS presents new CAT5e & Audio Hybrid Cable HG2X3M2E

Posted on October 13, 2026

With the new **HG2X3M2E**, KLOTZ AIS introduces a high-quality hybrid system cable that

KLOTZ AIS presents new CAT5e & Audio Hybrid Cable HG2X3M2E

combines two CAT5e network cables and two AES/EBU audio cables for transmitting both analogue and digital audio signals in a highly flexible braided sleeve. This combination provides a compact cabling solution with reliable signal transmission, specifically designed to meet the demands of professional live, touring and broadcast applications.

The new KLOTZ hybrid cable is particularly suitable for connecting remote d&b stage racks, Allen & Heath dLive systems or Yamaha consoles with Dante® where two separate CAT connections are required. For network transmission, the HG2X3M2E uses highly flexible KLOTZ CAT5e SF/UTP patch cables, while the analogue and digital audio connections are based on the proven KLOTZ OmniTRANS AES/EBU audio cable.

Rugged etherCON RJ45 and high-quality 3p XLR connectors, all featuring metal housings and clear colour coding, ensure easy handling and reliable connections in demanding live environments. The flexible braided sleeve combines all four lines into one compact assembly, making routing and handling easier in everyday use.

By combining network and digital audio connections in a single cable, the HG2X3M2E significantly reduces cabling requirements and keeps even complex setups neat and organised. The result is faster setup, more efficient cabling and reliable signal transmission in professional applications.
