

Le Maitre at Prolight & Sound

Posted on April 2, 2015

Le Maitre to launch new products at Prolight & Sound 2015, Frankfurt at Stand: 11.0/A64. The full line-up will include some of the following items:

PureHaze Fluid

Le Maitre hazers are known for their incredible output and low power consumption, not to mention the haze fluid which produces the purest, most efficient and long lasting haze on the market. To make this benefit even clearer to customers, Le Maitre has now re-branded its haze fluid as “PureHaze Fluid”.

Le Maitre’s PureHaze Fluid is 85-90% active ingredient combined with just 10-15% water. Not 80-90% water and only 10-20% active ingredient as is the case with so many other haze fluids on the market. In fact many aren’t even true hazers at all but simply smoke machines with fans and which consequently have to use much lower concentrated solutions which are in fact smoke fluids. As a result, competitive haze systems need to create 8 to 9 times the output to achieve the same haze effect that Le Maitre’s Haze machines produce. Put quite simply a competitive unit

would need to consume 8 to 9 times more fluid just to produce the same haze effect!

Combine this with the fact that Le Maitre's sugar-based fluid is extremely green and completely safe to use on the stage or in crowded clubs and Le Maitre's PureHaze fluid is an environmentally friendly winning product all round.

Le Maitre's haze fluid is included in equipment guidelines, calibration and health effects reports on the use of smoke and haze prepared by bodies including ESTA (now PLASA) and Environ.

Full Product Line Up For Le Maitre on Stand 11.0/A64

Le Maitre will be demonstrating their full line-up of smoke, haze and low fog machines along with a selection of pyro controllers and accessories as well as videos of their pyrotechnics.

HazeMaster - Le Maitre's most advanced and powerful hazer yet. With its massive output capacity, high power variable fan and low power consumption it really is a class act. The combination of an industrial grade air-pump, a 2-stage heating process and a microprocessor controller, produce an output so powerful that the HazeMaster can convert up to 750cc of fluid per hour!

Add to that the rugged construction and you have a true professional hazer engineered to withstand the rigours of the road when on tour.

MVS Hazer - a powerful and versatile hazer with two variable-speed, high power fans used to control the force and direction of the haze stream. There is also a unique oscillating mode for automated back and forth sweeping of the stream. The MVS is geared towards medium to large sized venues.

Neutron Hazer - the popular, entry level hazer, ideal for small to medium sized venues. Its success lies in its simplicity and straightforward and economical operation - just switch on and it quietly produces haze for almost 100 hours on just 2.5L of fluid!

G300 Smoke Machine - Le Maitre's flagship water-based smoke machine is rugged, versatile

and has a very high output. The G300 is a uniquely dual-mode machine, offering both smoke and haze. Designed to perform in the most demanding of applications, it is the machine of choice among touring, rental, theme-park and cruise ship customers.

GForce 1/2/3 Series Smoke Machines - Le Maitre's range of high powered, continuous flow, water-based smoke machines, based on the core technologies of the G300, but engineered with new design and manufacturing enhancements, making them extremely economical.

Freezefog Pro Low Smoke Machine -The system of choice on stages, in studios, clubs and parks, this liquid CO2 chiller produces a dramatic, low-lying smoke effect when used in

conjunction with a G300 or GForce smoke machine.

Mini Mist – A robust, hand-held aerosol smoke machine which uses a smoke fluid canister to create a thick fog effect. Ideal for TV and film, as well as the emergency services for breathing apparatus training exercises.
