

# Luminex Araneo Gigacore Software Release 1.11.0

Posted on October 26, 2026

With the release of **v1.11.0**, Luminex have introduced QSFP+ breakout support for the GigaCore O26-I, along with usability improvements and bug fixes.

## Support for QSFP+:

- Breakout to 4 × 10G on the QSFP+ ports of the GigaCore O26-I can now be configured in Araneo.

## Usability improvements:

- A Health Check item for the **maximum number of multicast registrations** was added, including a configurable threshold for each GigaCore, so the users can receive early indications.
- A timestamp has been added to the **peak bitrate**. Clearing the counters now also clears the peak bitrate for each port.
- A Tick **Connected / Disconnected Ports** function has been added to the port settings menu, allowing you to quickly select the checkboxes for all connected (or disconnected) ports in the port list. An Invert Selection function has also been added to the port settings.

**Bug Fixes:**

- LumiNode devices that are daisy-chained will now show connection lines
- A bug that could cause issues with the connection tool on macOS has been fixed.
- An issue that allowed the querier IP address to be set to 255.255.255.255 has been corrected; this value can no longer be entered.

... And there is more! Please click the button below to consult the full release notes.

Upgrade to this version from within Araneo or download this version from our website. For best performance and consistency, we advise all users to upgrade to the latest version.
