MA Lighting International Announces grandMA3 Software Release v2.4.2.2

MA Lighting International has officially announced the new grandMA3 software release v2.4, introducing a range of workflow enhancements and feature updates designed to further expand the capabilities of the grandMA3 platform.

The latest release focuses on improving user workflow, programming flexibility, and system integration across a wide range of applications including live events, theatre, broadcast, houses of worship, stadiums, and archtainment environments.

Key highlights of the grandMA3 Software Release v2.4 include:

- Phaser Workflow improvements
- Preset enhancements
- Preview functionality updates
- Phone Tethering support
- MVR workflow improvements

The release also introduces a selection of updated demo showfiles tailored for Theatre, House of Worship, Stadium, and Archtainment applications, giving programmers and operators practical examples for real-world workflows and show environments.

In addition to the grandMA3 software release, MA Lighting International has also introduced an updated grandMA2 software version, including updates for MA VPU, grandMA2 3D, and MA Network Switch software.

The continued development of the grandMA platform reinforces MA Lighting's commitment to providing advanced lighting control solutions for productions and installations worldwide.
