

Neutrik stock available at DWR

Posted on July 21, 2023

DWR Distribution is pleased to announce that Neutrik and Rean stock is now available in our stores. Our goal for Neutrik is to ensure that this fantastic product range is easily accessible to users across the country.

“Kyle Robson has been appointed the Neutrik Product Manager at DWR and it will be his mission to get the brand to as many users in the country as possible,” comments Robert Izzett, Sales Director at DWR. “In addition, DWR will appoint Neutrik distributors throughout South Africa to make accessibility that much easier for musicians and professionals alike. Our goal is to make

Neutrik the connector of choice and we will strive to be as competitive as possible." As an example, a 3-pin XLR male will retail for as little as R28.00

As a world leader when it comes to connector systems for the entertainment industry, the Neutrik Group (comprising of the Neutrik, Rean and Contrik brands), needs little introduction. The Neutrik product line includes XLR connector systems, jacks and plugs, speaker connector systems, ethernet connectors, power connectors, multimedia connectors, fibre optic connector systems, patch bays and coaxial plugs.

Rean, in turn, provides designers of audio, video and lighting products with a comprehensive range of connectors featuring ultra-robust, high-reliability designs, that promise unmatched cost-performance ratios, backed by a global supply-chain and experienced regional sales network. An extensive worldwide portfolio of connectors incorporates a full range of 'standard' professional XLR, ¼" Jack, XLR/Jack combo, Ethernet, Power Connector, 3.5mm, Phono, DIN, and Dual Banana plug solutions, and the new Z Series of IP65 rated XLR and RJ45 Ethernet connectors. These are specified for outdoor applications, resistant to water and dirt, and optimised for use in lighting and digital signage applications.

"When investing in expensive gear, a reliable connector and the right infrastructure should be a priority," adds Robert. "One bad connector can bring your gig down. With well over 40 years of experience, Neutrik offers a wide range of connectors that are easy to assemble, simple to use, reliable and robust. We are delighted that the stock has arrived and we believe that Neutrik will become the connector of choice."
