

New line of closed-back studio headphones from Audix

Hear what you've been missing with the new line of dynamic closed-back studio headphones from Audix. With four models, there's one for everyone.

The **A140** is the perfect choice for home studio and music enthusiasts alike. Featuring a professional, high-quality design, the A140 provides exceptional clarity and a tight, balanced sound across the entire frequency range.

The **A145** recreates the listening experience of a control room or recording studio environment. Tight bass, clear and accurate midrange, and smooth highs make the A145 a perfect choice for headphone mixing, playback, and critical listening for both professionals and music lovers alike. The 45 mm drivers are high-performance and phase-coherent, delivering a consistent, reliable sound mix after mix.

The **A150** is designed with one goal in mind: to reproduce music with accuracy throughout the full frequency range with a smooth, balanced linear response. Featuring 50 mm phase-coherent drivers, the A150 headphones are designed to be worn for hours without listening fatigue.

With an extremely wide sound field and the most extended bass response, the **A152** headphones represent a new level of sound reproduction for audiophile listeners. Studio or hi-fidelity listening alike, the A152 captures every detail and nuance in the sound field. Even gaming enthusiasts using the A152 headphones will enjoy an audible advantage when split seconds matter.

The full range 50 mm phase-coherent drivers coupled with the lightweight and comfortable headset design provide hours of listening without fatigue.
