New PA Series Laser Projectors from NEC

Posted on January 19, 2021

A new class of quiet laser projectors

Unique to NEC, filter-free LCD technology means there is no need to change filters or replace bulbs. Already established as a world-class projector solution due to its low total cost of ownership and low-maintenance design, the PA Series can run up to 20,000 hours without requiring any outside service.

Combining vibrant 3LCD colour performance with a low total cost of ownership, the next generation of laser projectors, the PA804UL and PA1004UL, means that meeting rooms, classrooms, lecture halls and museums can now experience the benefits of a silent projector that displays striking imagery.

Long-life and zero maintenance

With the newly designed sealed optical engine, the LCD panels are protected against dust contamination for long-term picture stability and brilliant colour brightness.

With no filter cleaning nor lamp replacement necessary, service costs are dramatically reduced for a low cost of ownership and up to 20,000 hours life-time.
