New PRO AES digital audio cable series by KLOTZ

Posted on December 23, 2020

The new PRO AES digital audio cable series with XLR 3pin connectors is now available!

The professional D-Series from KLOTZ is optimized for long transmission distances of AES/EBU signals and currently consists of the four variants D2, D3, D4 and D5.

For the D-Series we only use high-quality digital cables from our OmniTrans AES/EBU series with 2 x 0.22 mm² (AWG24) cross-section. These cables have an exact characteristic impedance of 110 Ohm and very low crosstalk.

The D2 series is made from the ultra flexible high-end digital cable OT2000 with a very low capacitance of 52pF/m (15pF/ft). The D2 cable is perfectly suited as a flexible, mobile studio cable.

The D-Series variants D3, D4 and D5 consist of the double shielded OmniTrans OT206 cable series. While the D3 and D4 digital cables have a black or blue PVC jacket, the D5 digital cable has a blue, robust PUR jacket and a transparent heat-shrinkable sleeve for self-labelling. The D5 series is ideally suited for the daily hard touring life.

The new KLOTZ D-Series is available both with connectors from Neutrik and with the new XLR 3pin connectors from KLOTZ – of course, as always “made in Germany” with the 6-fold KLOTZ quality control according to ISO 9001:2015.

The new, patented KLOTZ packaging also ensures optimum
