

Premium Tracking with zacktrack mini

The latest product to the zacktrack portfolio, [zacktrack mini](#) is now ready for action. The tracking solution comes in a briefcase sized case for easy transport and deployment by one person! zacktrack mini embraces the core zacktrack values and puts this tracking solution in a smaller form factor with battery operated components and wireless connectivity for an even faster and easier setup. The user experience is at the heart of zacktrack mini.

Smaller venues, exhibitions stands, individual performers, rental companies, House of Worship are only a small number of the broad applications for our new smaller friend. With this new system helping to introduce tracking to new users and smaller spaces, zacktrack mini will also be a more economically viable solution for many users too. Tracking and following is now opened up for any application, designer or performer to embrace and use.

zacktrack mini can be physically setup in minutes. A Master Anchor forms the nucleus of the zacktrack mini infrastructure. This Master Anchor is of course an Antenna. But, additionally it is the zacktrack Server, also the wireless access point and it's even a DMX Node! Yes, zacktrack mini can output DMX directly to fixtures with XLR cable. This concept of the Master Anchor having four uses in one box already simplifies the system for the user and removes the need for additional hardware previously needed such as the wireless access point, DMX Node and network switches.

?

Five smaller Anchors complete the deployed Antenna array or cell, giving us a tracking or performance area of 15 x 15 metres. zacktrack mini gives us 2.5D tracking, so the Z height is achieved with using height offset – easy to use instantly on the Android tablet or on a console fader! To help with Anchor deployment and positioning, your zacktrack mini kit includes small tripods that secure directly onto the Anchor housing.

?

The 5 trackers included in a zacktrack mini Kit are used on your stage floor for fixture alignment (tracker calibration discs and charging station included too) – The Plug and Play nature of the zacktrack SMART system is continued into

zacktrack mini. USB-C Chargers are also included in a zacktrack mini Kit for all components, most importantly

those have replaceable multi-region plugs in the kit too. Now you can take your portable, battery powered tracking solution anywhere in the world and get straight to work!

?

zactrack mini can be used stand-alone or can be integrated to use with an industry standard lighting console, maintaining that hands-on creative control for the designer and operators.
