REAN Air-tight Chassis

The Neutrik Group is pleased to announce the new REAN Air-tight series including Ethernet, XLR (available now) and Power Chassis (in Q4).

When plugged in or closed with rubber caps, the receptacles are AIRTIGHT and thus offer protection class IP65 out of the box.

Why airtightness matters

In industries such as lighting technology, modern testing procedures require products to be tested quickly and

easily for approval of protection classes such as IP65. For those tests, positive or negative air pressure is used. If no air can ingress, steam, water or dust cannot get into the housing or damage the electronics either.

Features of the upgraded airtight product generation

- IP65 protection and airtight design
- One-piece design with rubber cap
- V0 material accepted as a component of equipment to IEC62368-1
- Rugged diecast shell with fashionable black plating

Compatibility

The air-tightness Ethernet and XLR chassis are fully mating compatible with existing REAN IP65 Ethernet and XLR connector (Z Serie) to achieve IP65 level protection.
