

Redback 12 – twice the bite

LSC Lighting Systems has announced the release of the latest addition to the Redback family of dimmer racks.

The new Redback 12 dimmer provides 12 channels at 10A with 100% Duty Cycle in only 2RU of height.

The concept behind the Redback project was to produce a feature rich, high quality reliable dimmer in a small compact footprint at a very affordable price. After extensive development and product testing, LSC is confident that they have delivered these objectives. The Redback range is designed for mass manufacture resulting in a reduced overall build price and hence sale price, without compromising quality. It is undoubtedly one of the best dimmers designed and manufactured by LSC in its 30 year history.

The Redback 12-channel dimmer is designed to be the class leader, and so it is fully compliant with the new RDM (Remote Device Management) protocol, allowing remote configuration from any RDM compatible controller. This new functionality will also soon be available as a free software upgrade for all existing 6-channel Redback dimmer racks.

The innovative design allows the unit to be assembled as either a 2RU dimmer (with outlets on the rear) or as a 4RU dimmer (with outlets on the front). The rack mount ears can also be reversed to allow the unit to be wall mounted if desired.

The Redback dimmer range, like all of the LSC product range, is certified as a “Product of Australia”. This means that it is completely manufactured in Australia, NOT just assembled out of imported modules. This ensures that LSC can control the quality at all stages and guarantee the LSC reputation for reliability.
