

Set yourself free with the DiGiCo S-Series App

Posted on April 4, 2017

The new DiGiCo S App is the perfect way to control your DiGiCo S-Series console straight from your Apple iPad. Designed to be compatible with DiGiCo's S21 and S31, it allows remote, wireless control of any DiGiCo S-Series mixing console wherever you are.

The DiGiCo S App permanently displays an overview of the console layout, so you can select any available console bank and have the same user-friendly operation you are already familiar with, without being tied to your console.

Channel Setup – +48V, polarity, analogue gain, digital trim, channel delay, insert points on/off, meters

Mix – channel label, pan, mute, solo, fader level, meters

EQ – 4 band EQ plus HPF/LPF

Dynamics – all dynamics parameters for all console dynamics modes

Set yourself free with the DiGiCo S-Series App

Auxes – auxiliary send levels, on/off, auxiliary pans
Buss Routing – assignment of channels to busses
Snapshots – insert new, recall, update, delete
Matrix – sends, on/off, matrix input labels
Graphic EQ – 32 faders and on/off for each unit, flatten all bands
Save Session

There is also an overview mode for selecting the Bank that you wish to control. Tap the arrow down symbol in the top right corner of the main view
Connection details can be saved for different devices
Aux Select buttons can (optionally) activate the Solo function for the relevant Aux Channels. Tap the Aux Menu button a second time to activate/deactivate this function.

The DiGiCo S App requires V1.4+ of the S-Series console software and the iPad connection must be configured on the console. It is not compatible with earlier versions of S-Series software.
