

Showcase by Vectorworks

Posted on October 18, 2024

VECTORWORKS® SPOTLIGHT

Showcase, a new addition to Vectorworks Spotlight, enables streamlined previsualization directly in the software's interface. With version 2025, you'll be able to design and test your show in just one software program.

Showcase is specifically created for entertainment design and production professionals. These tools and commands allow you to previz the conventional lights, moving lights, video, and other effects that make up a production, simulated in the context of the event venue.

With Showcase, you can program and cue your show, whether you are selling a concept to the client, testing lighting cues, or confirming lighting systems for a new venue. You can previz without being at the venue or having a crew on standby. Experiment with looks and cues, and review the options with clients and artists before the actual load-in.

Showcase incorporates many of the features of the standalone program, Vision, but it is designed for use within Vectorworks, for all-in-one design and previsualization.
