The Visual Productions SpiNode

Coming Soon to DWR Distribution: The Visual Productions SpiNode

At DWR Distribution, we're passionate about bringing the latest technology to our industry — and we're thrilled to announce that the **Visual Productions SpiNode** will soon be available through our doors!

The **SpiNode** is a **high-performance eDMX node** purpose-built for **LED pixel control**. It translates **Art-Net** and **sACN** protocols into **four independent SPI outputs**, each capable of driving up to **1,024 pixels**, with up to **six DMX universes per port**. Altogether, the SpiNode

can handle **24 universes** — making it a powerful and compact tool for pixel-mapped lighting control.

Key features include:

- Support for a wide range of SPI protocols including **WS2812**, **SK6812**, **APA102**, **WS2811**, and many others
- A **web-based interface** for easy, intuitive configuration
- **Built-in test functions** for universe mapping, LED identification, and fault detection
- **PoE powered**, with a **DIN-rail form factor** ideal for installations
- Backed by a **5-year warranty** for peace of mind

Pair the SpiNode with **CueCore3** to unlock **16 additional universes**, and with a second SpiNode, achieve a total of **32 universes per CueCore3**.

This is a serious solution for lighting professionals — and we can't wait to get it into your hands.

Designed and manufactured in the Netherlands by Visual Productions.

Stay tuned and follow us for updates.
