

Upgrade Your Sound with the Fischer Amps Mini DI-Box!

Mini DI-Box

This basic tool for balancing all instrument signals should be in every toolbox.

This compact DI-Box easily clips onto your belt or instrument strap, keeping your setup light and interference-free. Thus the unbalanced signal path is very short which minimises interferences to the instrument signal. The signal is balanced electronically.

An LED indicates whether the required phantom power is on. The ground of the input and output signal is capacitively uncoupled which prevents ground loops. The Fischer Amps Mini DI-Box has a switchable input impedance which enables balancing of high-ohm input signals without loss. This basic tool for balancing all instrument signals should be in every toolbox.
