Haarlem, The Netherlands - Lighting controller manufacturer Visual Productions today announces

Visual Productions Joins Q-SYS Technology Partner Program

it has joined the Q-SYS Technology Partner Program. This program enables software and hardware technology partners to create market-ready solutions that integrate seamlessly with Q-SYS, a cloud-manageable audio, video and control Platform.

As part of the program, Visual Productions has worked closely with Q-SYS, who has fully vetted and endorsed the following plugin integration with a Q-SYS Ready badge (developed by Visual Productions and verified by Q-SYS).

The CueCore2 is a compact form-factor lighting controller for semi-permanent installations and architectural lighting. Designed for non-stop operation, the CueCore2 has no moving parts; the unit is completely solid-state and achieves a remarkable level of reliability that allows lighting engineers to 'fit and forget'. Although it is bundled with various supporting software tools, once programmed, the CueCore2 can operate completely stand-alone. It will playback lighting shows, static scenes and dynamic effects through its two DMX-512 universes. The unit can be programmed to respond to a variety of incoming protocols or scheduled to time or day.

"We are thrilled to be an official Q-SYS Technology Partner with a control plugin for our CueCore2 lighting controller in Q-SYS Designer. We look forward to making additional lighting controller plugins in the future to offer professional level lighting control and automation to the vast majority of system integrators using Q-SYS," says Visual Productions' Maarten Donath.

"We are proud to have Visual Productions join our program and work collaboratively with us on future plugin integrations that will enable elevated experiences across our shared customers," says Geno Zaharie, Principal, Alliances & Ecosystem, Q-SYS.

About Visual Productions - Leading manufacturer of lighting control for system integration and fixed installation lighting projects. The control systems are designed for permanent installations in hospitality, retail, museums, theme parks, cruise ships and architectural landmarks. The ease of operation and the incorporated technologies (DMX, DALI, RDM, sACN, SMPTE, MIDI, UDP, OSC, GPI, PoE) make these controllers ideal for system integration.
