

Wireless DMX with LumenRadio

Professional lighting is an art form, and art is all about creativity and freedom. Reliable Wireless DMX is today a “must have” within the Motion picture lighting, Stage Lighting and Architectural lighting industries. LumenRadio’s CRMX™ technology for wireless DMX has become known for unprecedented reliability and flexibility. With their patented Cognitive Coexistence* technology, products automatically avoid interference and will give you the trust you need to control your fixtures wirelessly.

Wireless DMX has revolutionised the way of controlling lights and special effects on a movie set and has given Lighting technicians more freedom in creating their vision than ever before.

The most expensive asset on a movie set is the actors and being able to control the lights within minutes is a huge advantage to the production team. Wireless DMX products are chosen because of the ease of use, reliability and functionality during costly productions.
